IN THE CLAIMS:

Please cancel Claim 7 without prejudice or disclaimer of subject matter, and incorporate the substance thereof into Claim 1, as follows:

1. (Currently Amended) In an XML-based document which includes text delimited by plural element types respectively defining at least vector graphic shapes, images and text, each element type having an opening tag and a corresponding closing tag which collectively conform to a document type definition that defines rules for the plural element types, the improvement comprising:

the XML-based document includes text for plural pages as well as page-information text, wherein the page-information text is delimited by page-information element types that define location in the document of the text for each of the plural pages; and

the XML-based document further includes document-resource text that
specifies a location pointer in the XML-based document for resources used by pages in the
XML-based document.

2. (Original) An XML-based document according to Claim 1, further comprising page-directory text which includes the page-information text, the page-directory text being delimited by page-directory element types which contain at least one page-information element for each of the plural pages.

- 3. (Original) An XML-based document according to Claim 2, further comprising directory-information text which includes the page-directory text, the directory-information text being delimited by directory-information element types that specify the number of the plural pages and which contains the page-directory elements.
- 4. (Original) An XML-based document according to Claim 3, wherein the directory-information text further includes thumbnail-information text that defines a graphic for each of the plural pages, the thumbnail-information text being delimited by thumbnail-information element types.
- 5. (Original) An XML-based document according to Claim 4, further comprising thumbnail-directory text which includes the thumbnail-information text and which is delimited by thumbnail-directory element types.
- 6. (Original) An XML-based document according to Claim 3, further comprising document-attribute text delimited by document-attribute element types and that specify attributes of the document.
 - 7. (Cancelled)

- 8. (Currently Amended) An XML-based document according to Claim 8

 Claim 1, further comprising a directory-table-list element that includes the documentresource text and at least an indirect reference to the page-information text.
- 9. (Original) An XML-based document according to Claim 8, further comprising document-directory-table text delimited by document-directory-table types and that provides location information of the directory-table-list text.
- 10. (Original) An XML-based document according to Claim 1, wherein the page-information text is included in document-directory information stored in the XML-based document.
- 11. (Original) An XML-based document according to Claim 10, wherein the document-directory information is stored at or near the end of the XML-based document.
- 12. (Original) An XML-based document according to Claim 11, further comprising a directory-exists element delimited by directory-exists element types, the directory-exists elements directly or indirectly defining the location of the document-directory information, the directory-exists element being located at or near the beginning the XML-based document.

- 13. (Original) An XML-based document according to Claim 1, wherein the XML-based document is comprised of an SVG-based document.
- 14. (Currently Amended) An authoring tool for an XML-based document according to any one of Claims 1 to 13 Claims 1 to 6 and 8 to 13.
- 15. (Original) An XML-based document according to Claim 14, wherein the authoring tool is comprised of a print driver.
- 16. (Original) An XML-based document according to Claim 14, wherein the authoring tool is comprised of a stand-alone application.
- 17. (Original) An XML-based document according to Claim 14, wherein the authoring tool is a plug-in to another application program.
- 18. (Currently Amended) A viewer for an XML-based document according to any one of Claims 1 to 13 Claims 1 to 6 and 8 to 13, wherein the viewer parses the XML-based document based on a current page being viewed and based on the page-information text, so as to render and display the current page.
- 19. (Original) An XML-based document according to Claim 18, wherein the viewer is comprised of a stand-alone application.

20. (Original) An XML-based document according to Claim 18, wherein

the viewer is a plug-in to another application program.
